# Automotive

The TW Hicks self-leveling shop floor system is a solid color, textured, resin rich, aggregate filled, seamless, epoxy based floor coating system. The incorporation of durable, hard aggregate broadcasted and sealed into the surface economically increases coating thickness, extending life expectancy against aggressive wear.

The shop floor system is typically installed to protect new or existing concrete floors at a thickness range of 1/16" - 1/4". The light to medium duty, general service epoxy coating demonstrates good chemical resistance as well as high abrasion and impact resistance.

## Where To Use

- Interior slip resistant floors
- Maintenance shops
- Chemical and battery storage areas
- Showrooms, breakrooms, restrooms

## Advantages

- High abrasion and impact resistant
- Good chemical resistance
- Durable, impermeable and seamless
- Variety of textures available
- Variety of slip resistant surface profiles
- Integral cove, base and curbs (optional)
