Manufacturing

The TW Hicks epoxy trowel mortar system is a solid color, seamless, epoxy based floor resurfacer. This system is typically installed to protect new concrete or overlay existing worn floors at a thickness of 1/8" to 1/4" in thickness.

This system can be placed using a screed and power trowel or hand trowel. The surface finish will have a slight orange peel finish and can have many variable surface textures to produce a range of anti-skid finishes.

Where To Use

- Light to heavy duty manufacturing
- High traffic aisles
- Production areas
- Service bays

Advantages

- High abrasion and impact resistant
- Durable and seamless
- Protects new concrete from abuse
- Rejuvenates worn surfaces
- Handles heavy point loads
